## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-5, 33-36, 40-43 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. PUB 2005/0157683.

Re Claims 1, 5, 33 -36, 40-43 fig. 11 teaches Beam forming Antenna array 40 wherein 40 includes a transmitter array and plurality of beamformers wherein 40 is coupled to the SpaceTime Transmit Diversity Encoder 10 that receives Sin having a period of 2T, whereby the encoders outputs the same signal but different in space time coding in respective channels; these signals are received by 40 whereby the antenna arrays produces beams 1 & 2 (a plurality of directional transmission beams) for transmitting the signal in its respective paths (via different transmission paths) to the receiver [0049, 0059, 0088].

Re Claim 2, refer to Claim 1, wherein 10 arranges the symbols (items) in different times periods and different beams.

Re Claim 3, refer to Claim 1, wherein the CH1 includes two sequential symbols and CH2 includes two symbols in reverse order.

Re Claim 4, refer to Claim 3, wherein one of the symbols is complex conjugate of the corresponding symbol and the one of symbol is inverse of the complex conjugate of the corresponding symbol in the other transmission signal.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. PUB 2005/0157683 in view of U.S. PUB 2002/0101908.

Re Claim 6, '683 fails to explicitly teach that the encoder includes a channel estimator and a combiner to yield an output signal. However, '908 teaches that space time encoded signal is very sensitively affected by channel estimation error, so two stage channel estimation is generally used to obtain the correct channel estimate to obtain the combined yield. One skilled in the art would have performed channel estimation in the encoder of '683 to mitigate for channel fading. Therefore, it would have been obvious to one ordinary skilled to combine the teachings.

***Allowable Subject Matter***

5. Claims 7-13 are allowed.
